[1.14.0] Handling SMART services

Sample request to create a parcel

For allegro shipments there is no longer the requirement to send the allegro_transaction_id and allegro_user_id parameters in custom_attributes and it is sufficient to send a complete masked allegro email, e.g., jtnfk4pjz+fe7351c0@user.allegrogroup.pl

Added possibility to provide SMART services when creating shipments (inpost_locker_standard_smart, inpost_locker_allegro_smart)

The attributes are available as in the simplified mode: Creating a shipment in the simplified mode

Differences in attributes:

Parameter	Type	Description	Validation
cod	CodForm	Collection amount.	The attribute is not required.

Previous allegro parcels

For allegro shipments there is no longer the requirement to send the allegro_transaction_id and allegro_user_id parameters in custom_attributes and it is sufficient to send a complete masked allegro email, the e-mail will be in the form of `staykodnadawcy+identyfikatortransakcji@allegromail.com`, for example `8awgqyk6a5+cub31c122@allegromail.com`.

Creating SMART parcels

Parcels with SMART services may be created only for an email from the allegro domain:

- allegromail.pl
- user.allegromail.pl
- user.allegrogroup.pl

When an email from the allegro domain is provided and the inpost_locker_standard or inpost_locker_allegro service, or when the client has a SMART limit for the given email, the service will be automatically changed to its equivalent with _smart

Below are the services to use for the available delivery methods:

Delivery method - **Paczkomaty 24/7**:

without Allegro Smart - we use the **inpost_locker_standard** service
with Allegro Smart - we use the **inpost_locker_standard** service, the service will be changed to inpost_locker_standard_smart when the customer is entitled to a SMART limit for a given email

Delivery method - A**llegro Paczkomaty 24/7 InPost**:

without Allegro Smart - we use the **inpost_locker_allegro** service
with Allegro Smart - we use the **inpost_locker_allegro** service, the service will be changed to inpost_locker_allegro_smart when the customer is entitled to a SMART limit for a given email

> ⓘ **Attention! Wrong service for the delivery method**
>
> If an inappropriate service is provided for the delivery method (e.g. the inpost_locker_standard service for the Allegro Paczkomaty 24/7 method), the SMART service will not be available.

Sample inquiries are available on the website Creating a shipment in the simplified mode

Sample request to create a parcel

```
