

InPost Developer Documentations

Welcome to InPost Developer Documentations website.

This website will document APIs, SDKs or other tools that are available for integration with InPost Services in Poland and also other markets.

InPost created these tools to provide you with means to:

- retrieve list of PUDO¹ locations (Parcel Lockers, Customer Service Points, etc.) to be implemented within your checkout;
- manifest parcels and declare returns;
- retrieve pricelists, parcel statuses;
- generate labels (PDF and/or EPL2/ZPL depending on country);
- embed InPost Geowidget within checkout for Parcel Locker selection;

¹ - PUDO - Pick Up Drop Off

Parcel Lockers within your checkout

With help our APIs you can implement many different ways of Parcel Locker selection that works well with your checkout process. It may be geolocation via map, dropdown list or anything else.

You can also embed InPost Geowidget and provide convenient selection to your Customers.

Search documentation

Customer places order

Your Customers place order to Parcel Locker of their choice to get maximum convenience! After all they will be able to Collect from any Locker 24/7.

Parcel preparation

Your IT system communicates with us to manifest parcels and retrieve labels that your staff places on parcels.

Parcels are then collected by our couriers and you can track delivery via our APIs.
